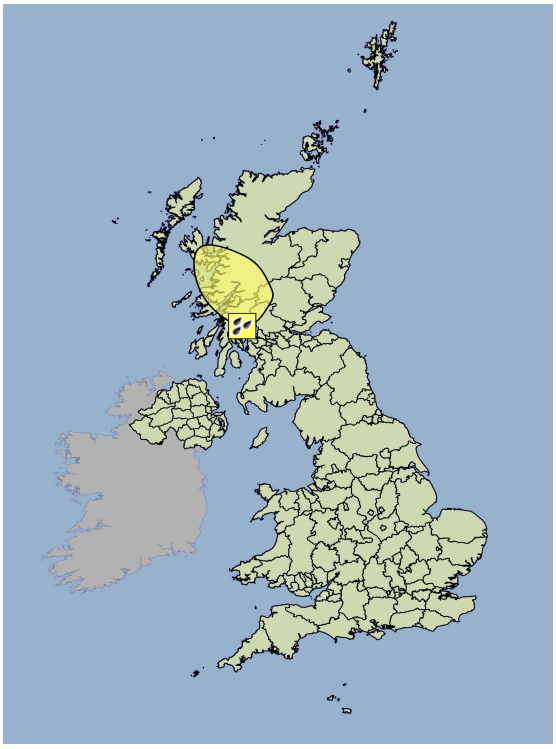
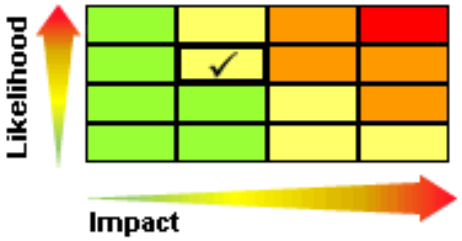
National Severe Weather Warning Service





Chief Forecasters Assessment
A low pressure system passing to the northwest of Scotland will bring a period of wet and windy weather from late on Thursday until finally clearing during Friday night. The highest rainfall accumulations are expected to be across parts of north west Scotland during Friday, though there is some uncertainty about locations likely to see the most rainfall.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Fri, 03rd May 2013** until **21:00 on Fri, 03rd May 2013**

Outbreaks of rain will turn persistent and heavy across northern Argyll, Lochaber, western parts of Tayside and Central and up towards Skye on Friday. Given occasionally heavy rain over the same area on Thursday, the public should be aware that there is a risk of localised river flooding. The rain will become lighter through Friday evening.
